# Developing healthcare leaders' capabilities at scale

#### Client need

A multinational medical device and healthcare organization needed to better understand, practice, and apply the critical capabilities of effective leaders.

To achieve this goal, the organization partnered with BTS to design a program for over 20,000 of its leaders. Together, they facilitated meaningful conversation amongst participating teams, coaching each leader to develop these critical capabilities over a four-phase journey.

#### The solution...

Throughout the 12-week virtually facilitated journey, which was delivered in 13 languages, participating leaders learned and practiced four key leadership skills:

## Inclusive leadership

Respecting and valuing diversity of thought, perspective, and approach.

## **Building** trust

Treating everyone
fairly and maintaining
open and honest
communication
patterns that inspire
teammates to speak
the truth.

### Creating culture

Fostering an
environment in
which all can thrive
but also challenging
employees to be at
their best.

## Coaching and developing

Pushing teams to
their full potential by
assessing individual
strengths and
development areas.

To build these skills, participating leaders followed a framework called "See-Hear-Speak," which culminated in a module focused on coaching and developing others:

**See:** building trust and drive inclusion by making others feel seen

**Hear:** helping teammates understand the value of their input

**Speak:** creating culture by communicating with clarity and compassion, after seeing and hearing

Throughout each phase, they experienced:

- Learning bursts, or digital scenarios during which to practice these concepts
- Supplemental online training using existing company content
- Go-dos, which are action items to be completed back on the job
- Peer pods, building trust through constructive conversation
- Development of **key takeaways and commitments**

After wrapping up the 12-week journey, each participating leader received a **sustainment plan** designed to help incorporate these new skills over a six-month period.

#### Results

The program yielded completion of over 11,000 peer pods and 269 1:1 coaching sessions. Direct reports of managers who completed the program have meaningfully higher employee engagement-survey scores than those whose managers opted out. Analyzing these scores four months post-program shows positive effects on profit, revenue, safety, and productivity as well.

Additional highlights include:

4.3/5	97%	4.2/5	+129k
Overall evaluation score	Completion rate	Participants gave effectiveness of training score	Go-Dos completed

"I've seen a big change in my manager. They're listening more and asking more questions, and while they've still got a ways to go to be a good manager, I'm seeing real progress."

"I began to realize that when you step back, you bring forward curiosity. I was able to notice someone else's state and I know they felt seen because they came up to me later and said 'thank you!"

"I'm finding more opportunities to get off 'auto-pilot,' get out of the box, and be more curious, really listening to others."

"I'm actively putting myself into a more empathetic mindset. I'm asking my people more questions, probing deeper into the data, and coming back with insights I've never seen from them before."
